

PARTICULUM MOBILE: ZEND EXPRESSIVE MICROSERVICES IN DOCKER SWARM

Jan Burkl
Solution Consulting Manager
Rogue Wave Software

php.ruhr 2017, Dortmund, November 9th 2017

zend®

The background features a series of thick, light blue diagonal stripes of varying lengths, creating a sense of motion and depth. The stripes are set against a white background.

ZEND EXPRESSIVE

EXPRESSIVE 2.0

The PHP framework for Middleware applications

- PSR-7 HTTP Message support (using [zend-diactoros](#))
- Support of *lambda middleware* (PSR-15) and *double pass* (\$request, \$response, \$next)
- Piping workflow (using [zend-stratigility](#))
- Features: routing, dependency injection, templating, error handling
- Last release 2.0.3, 28th March 2017

MIDDLEWARE

A function that gets a request and generates a response

```
use Psr\Http\Message\ServerRequestInterface as Request;
use Interop\Http\Middleware\DelegateInterface;

function (Request $request, DelegateInterface $next)
{
    // doing something with $request...
    // for instance calling the delegate middleware $next
    $response = $next->process($request);
    // manipulate the $response
    return $response;
}
```

INSTALLATION

You can install Expressive 2.0 using [composer](#):

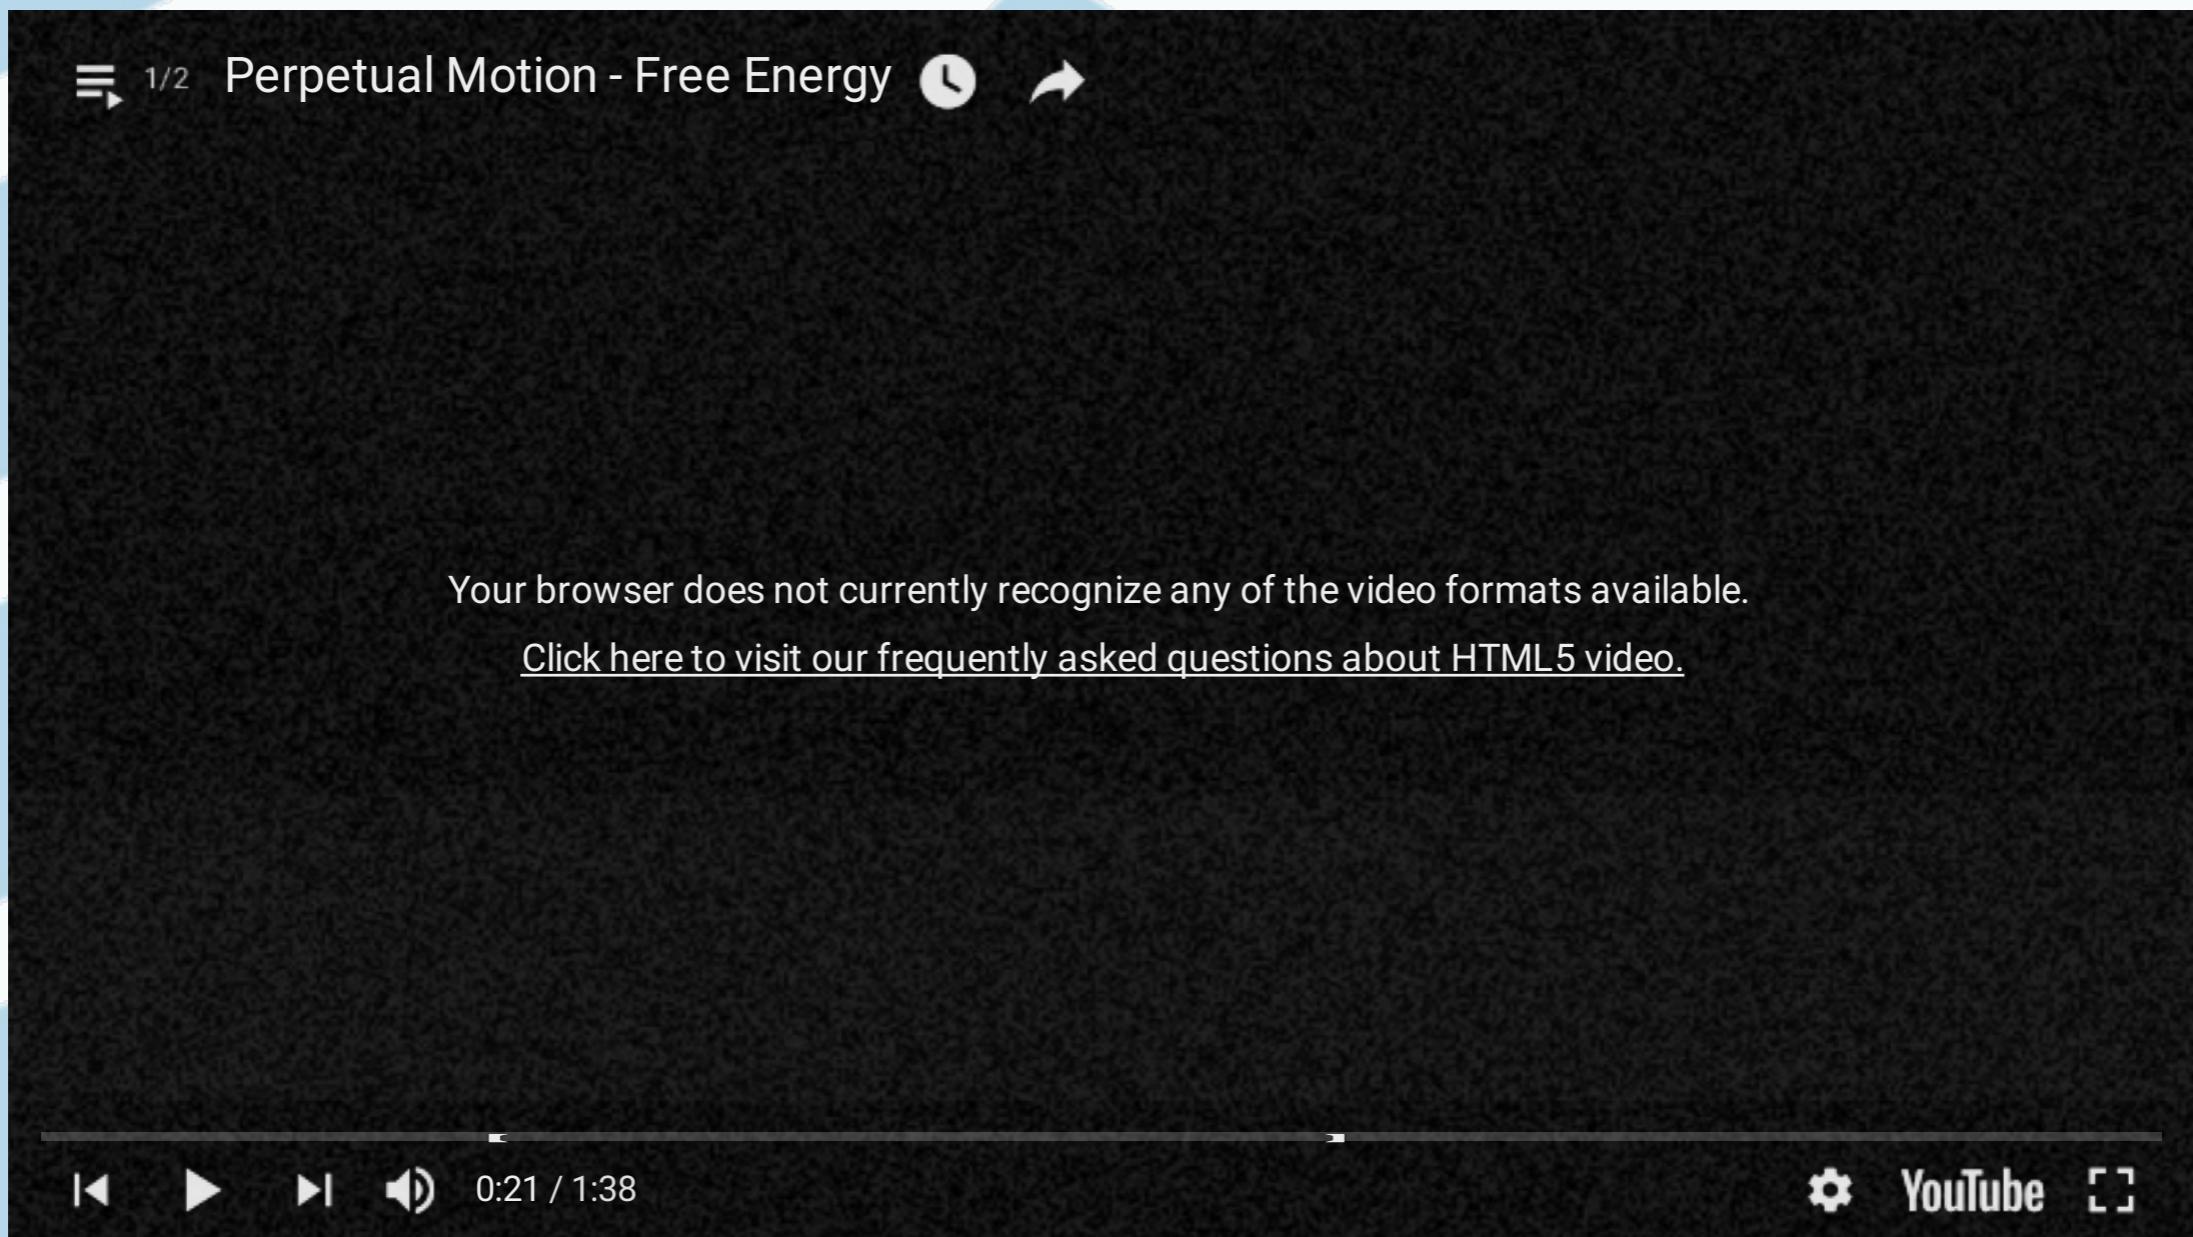

```
composer create-project zendframework/zend-expressive-
```

Choose the default options during the installation

The background features a series of thick, light blue diagonal stripes of varying lengths, creating a dynamic, layered effect against a white background.

MICROSERVICES

[...] a collection of loosely coupled services.”

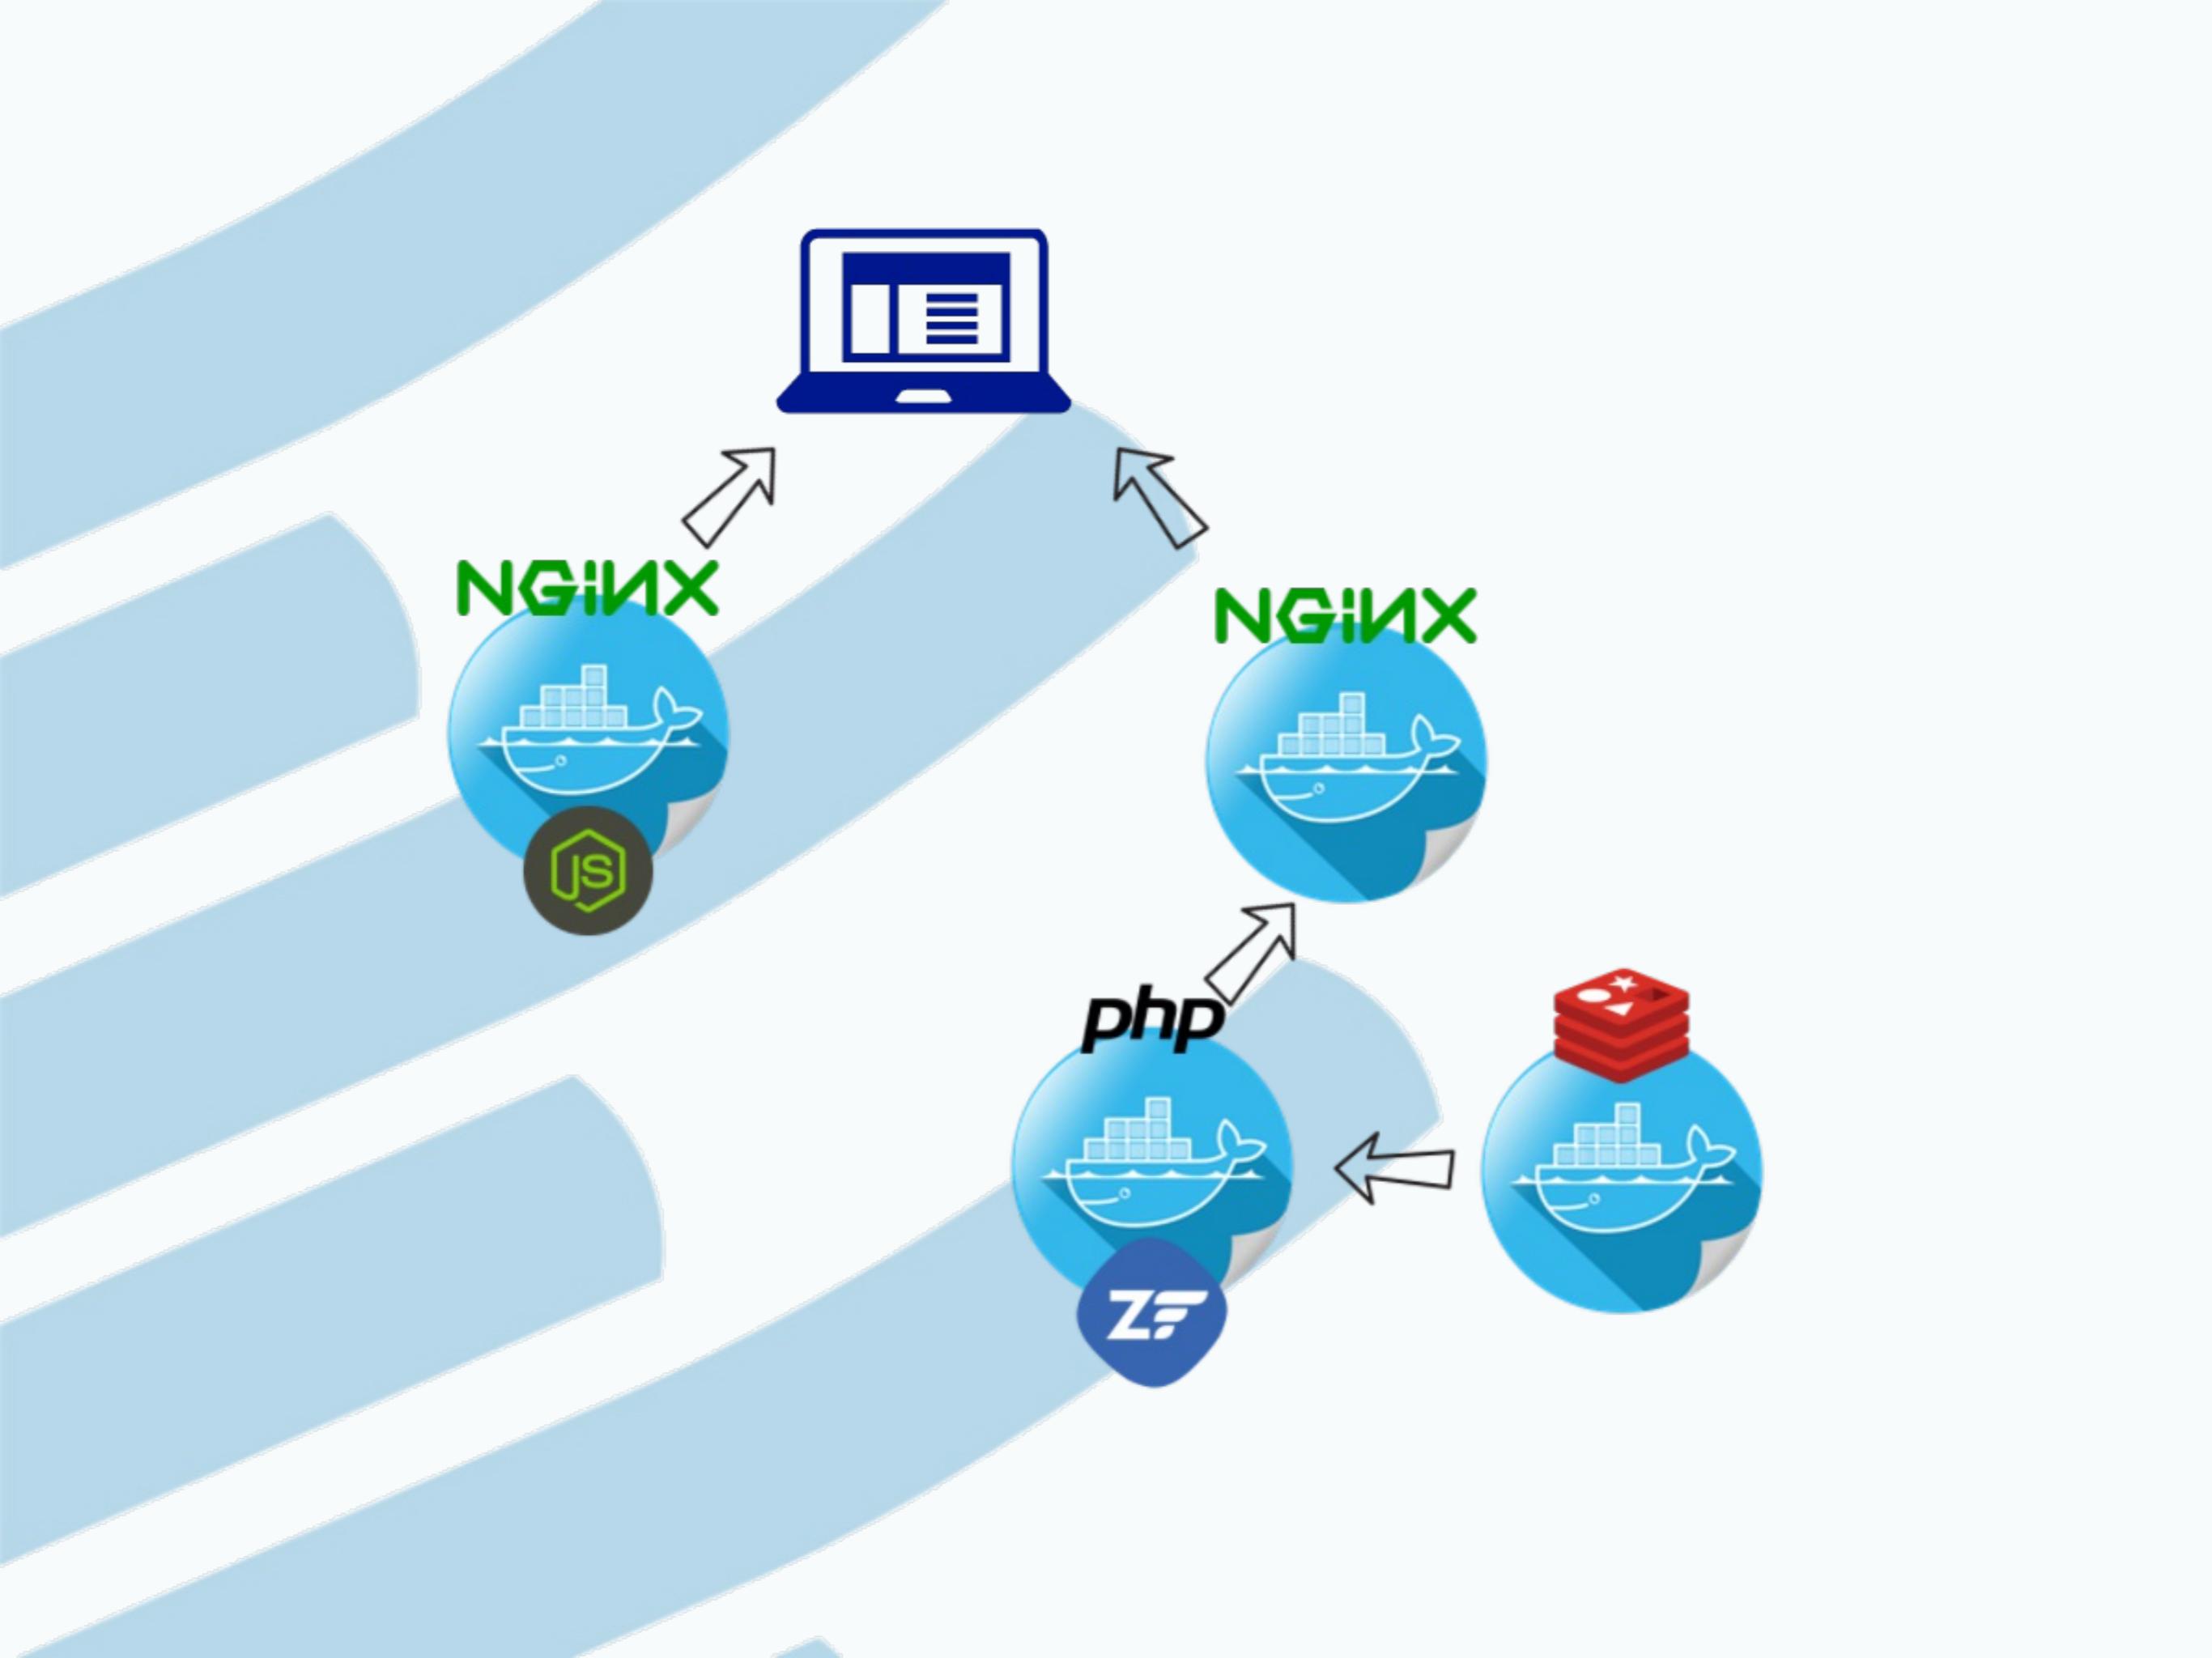

en.wikipedia.org/wiki/Microservices

- No Standard Definition
- No Specification
- Not specific to any Technology

DOCKER MICROSERVICE ARCHITECTURAL STYLE

[...] a suite of small services, each running in its own process and communicating with lightweight mechanisms, often an HTTP resource API”

martinfowler.com/articles/microservices.html

DOCKER COMPOSE

DOCKER SWARM (MODE)

“Current versions of Docker include swarm mode for natively managing a cluster of Docker Engines called a swarm. Use the Docker CLI to create a swarm, deploy application services to a swarm, and manage swarm behavior.”

MY LOCAL SETUP

- VirtualBox
- Vagrant
- 3 Nodes
- Ubuntu 16

INIT / MANAGER

```
$ docker swarm init --advertise-addr 192.168.99.121
```

Swarm initialized: current node (bvz81updecsj6wjj393c09

To add a worker to this swarm, run the following command

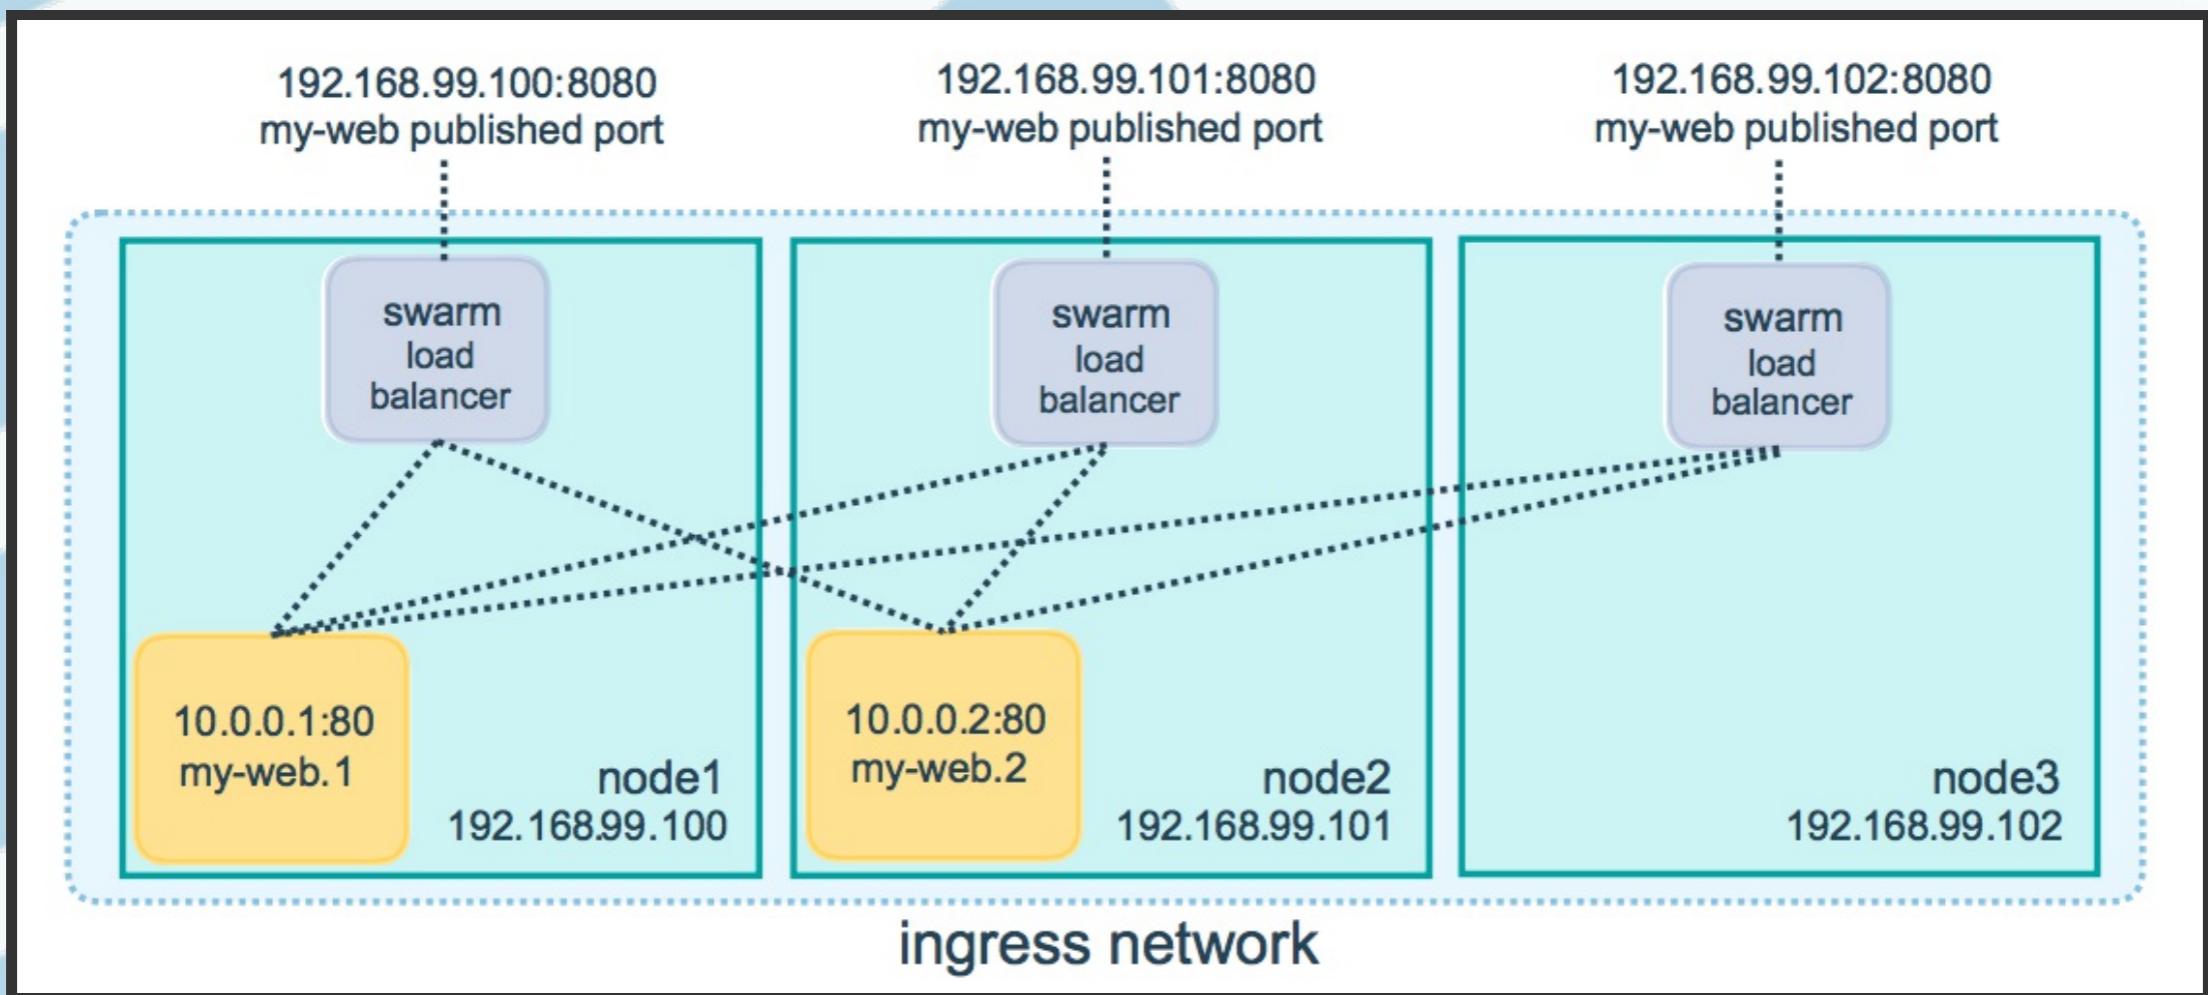

```
docker swarm join \
--token SWMTKN-1-3pu6hszjas19xyp7ghgosyx9k8atbfcr
172.17.0.2:2377
```

To add a manager to this swarm, run 'docker swarm join-t

ROUTING MESH

“The routing mesh enables each node in the swarm to accept connections on published ports for any service running in the swarm, even if there’s no task running on the node.”

INGRESS NETWORK

<https://docs.docker.com/engine/swarm/ingress/>

The background features a series of thick, light blue diagonal stripes of varying lengths, creating a sense of motion and depth. The stripes are set against a white background.

DEPLOYMENT

DOCKER COMPOSE V3

DEV

PROD

```
$ docker stack deploy --compose-file stack.yml pm
```

Install and Update

BUILDING (AND PUSHING) IMAGES

BUILD

```
$ docker build -t particulum-mobile/backend .
```

DOCKER-COMPOSE

builds images on-the-fly

MAKFILE

CIaaS

- (TravisCI)
- Codehip
- Wercker
- Codefresh
- etc...

PRIORIZATION

- Browser request limit
- Request queueing on server side

Just a Docker Compose file modification

BENEFITS 1/2

- Docker Swarm (& Compose)
 - See above ↑
 - System Setup Config in VCS
 - Modular
 - Consistent Stack

BENEFITS 2/2

Expressive

- Lightweight
- No Framework Silo
- Modular
- Back to the Roots
